

- 1)
a) 53
b) 35
c) 36
d) 58

3) Accept any of the long division methods used in the previous questions.

$$756 \div 21 = 36$$

They have sold 36 family tickets.

- 2)
a) 46
b) 42
c) 123
d) 299

- 1) The answer has been placed incorrectly in the place value columns. The correct answer is 13.
2) Accept an explanation that shows both methods will work although Elena's will be quicker. Both methods show that 10 lots of 75 are 750, leaving 150. 2 lots of 75 equal 150. The final answer is 12.
3) Answers may vary.

Children could disagree with Zeke and suggest that they think that C is the odd one out because the quotient is 24 but A and B have 24 as the divisor.

Answers a) 117 b) 5088 c) 78

- 1) Elias is incorrect. Drew will have the most packs (178).

Drew will have 178 packs because $2136 \div 12 = 178$.

Elias will have 176 packs because $1408 \div 8 = 176$.

Priya will have 175 packs because $2450 \div 14 = 175$.
